Animal Weight (in Pounds) 85

Date of Reported Weight 05/23/2020

Description

Hi my name is Montana Wik, I am 16 years old and I'm showing my weather meat goat Dexter, this is my 7th year and my last year showing and selling. When I purchased him, I was unaware that he had a digestive track issue so he wasn't gaining any weight or growing, I had decided to put him on goat minerals and baking soda, after about a week the problem was fixed. I then found out that my goat and my friends both had goat lice so we had to fix that problem as well, now that everything is fixed he is growing, he's healthy and I am more than ready to sell. I have been an officer with my club since I was in 6th grade and will be ending my year as the president of weaver 4-H. I learned that being an officer my public speaking skills have improved and have grown to be more mature around people. Once graduating as a senior I will be moving onto college to get my BA in criminal justice forensics photography, the money I get from selling will be put towards my college funding. I would highly appreciate if you put a bid on my animal, I have roughly invested \$450 in my animal this year due to the issues

that have happened. The virtual sale will be June 11 - 13, thank you for your time and interest in my market goat.

Sincerely, Montana Wik
